This is a terrible plan that really does nothing to clean up the river!

Cleaning up decades of pollutants requires more than just burying some of it and letting nature take the course of the rest. We deserve more than this and so does the wildlife that relies upon the river! You need to do better for us and for future generations and actually CLEAN UP this environmental mess.

With your "do nothing" plan too much of the river remains contaminated for generations to come. Environmentalists recommend that at least 1,000 acres of polluted sediment be removed from the river. The cleanup must be enough to allow removal of the Fish Consumption Advisory within a 10-20 year time frame

so that the fish in the Lower Willamette are as safe to consume as that in the rest of the Willamette River System.

Don't create a toxic waste disposal dump in our river--that is what we have now! Remove the toxic dredged sediments and taken them to an appropriate landfill.

Hold those responsible for the pollution accountable and have them pay for a comprehensive cleanup that will protect the health of our communities, our environment and our wildlife.
